## **Fractal Scale Cosmology : Framework Summary** Robert Demelo

Here a concise guide to the current state of fractal scale cosmology is given. It describes a unique fractal and velocity dependent scaling framework on quantum and macroscopic cosmology detailing an intrinsic, self-similar correlation to the geometry and material structure fundamentally constituting those cosmologies and respective dynamics. This highly predictive, heuristically formulated framework derives a series of interesting and precise results linking cosmic macroscopic objects to quantum scaled counterparts. These results include deriving the elementary charge from its macroscopic scale relative, scaling planetary masses to quantum particle charges, describing the link between charge and mass of quantum particles, demonstrating links through scaling between physical constants, explaining matter, mass and energy through interaction with a spatial quantum medium constituted of sub-quantum particles, and subsequently constituted of smaller discretely scaled self-similar mediums by scale factors of  $S$ .
