**Applied hydro- and aeromechanics; (Engineering societies monographs)** Oskar Karl Gustav Tietjens

Based on the famous series of lectures given at Göttingen by Professor Prandtl and enlarged with additional material on experimental methods by O. G. Tietjens, this volume presents practical applications of theoretical hydro- and aeromechanics. The methods it deals with can easily be followed by engineers, although advanced mathematics is used in the sections on airfoil.

Coverage is wide, ranging from an introduction to flow in pipes to Dr. Prandtl's own work on boundary layers, drag, airfoil theory, and experimental methods. Of special interest are discussions of entry conditions for flow in a pipe; turbulent flow in pipes and in the boundary layer; the method of determining the drag of a body from the velocity and pressure of the wake; measurement of pressure drop at the transition between laminar and turbulent flow; the laws of pressure drag, friction drag, and deformation drag; application of the momentum theorem to the Kàrmàn trail; experiments with the properties of slotted wings; the airfoil of infinite length; three-dimensional airfoil theory; and experimental methods and apparatus (pressure and velocity measurements, drag measurements, wind tunnels, and visualizing flow phenomena).

### **From reader reviews:**

#### **Gerald Dews:**

Inside other case, little folks like to read book Applied hydro- and aeromechanics; (Engineering societies monographs). You can choose the best book if you want reading a book. Provided that we know about how is important any book Applied hydro- and aeromechanics; (Engineering societies monographs). You can add understanding and of course you can around the world with a book. Absolutely right, simply because from book you can learn everything! From your country until eventually foreign or abroad you will be known. About simple factor until wonderful thing it is possible to know that. In this era, we can easily open a book or perhaps searching by internet product. It is called e-book. You can use it when you feel bored stiff to go to the library. Let's examine.

#### **James Ray:**

Reading a guide tends to be new life style with this era globalization. With looking at you can get a lot of information which will give you benefit in your life. Together with book everyone in this world may share their idea. Ebooks can also inspire a lot of people. Plenty of author can inspire their very own reader with their story or maybe their experience. Not only the storyline that share in the ebooks. But also they write about advantage about something that you need illustration. How to get the good score toefl, or how to teach your sons or daughters, there are many kinds of book that exist now. The authors nowadays always try to improve their expertise in writing, they also doing some study before they write for their book. One of them is this Applied hydro- and aeromechanics; (Engineering societies monographs).

#### **Rene King:**

The particular book Applied hydro- and aeromechanics; (Engineering societies monographs) has a lot of knowledge on it. So when you read this book you can get a lot of gain. The book was compiled by the very famous author. This articles author makes some research previous to write this book. This kind of book very easy to read you can get the point easily after reading this article book.

#### **Verna Riddle:**

What is your hobby? Have you heard this question when you got students? We believe that that question was given by teacher on their students. Many kinds of hobby, Everybody has different hobby. And you know that little person like reading or as reading through become their hobby. You should know that reading is very important and also book as to be the point. Book is important thing to provide you knowledge, except your current teacher or lecturer. You will find good news or update with regards to something by book. Numerous books that can you decide to try be your object. One of them is Applied hydro- and aeromechanics; (Engineering societies monographs).
