Modeling Human Behavior With Integrated Cognitive Architectures: Comparison, Evaluation, and Validation

Modeling Human Behavior With Integrated Cognitive Architectures: Comparison, Evaluation, and Validation

Resulting from the need for greater realism in models of human and organizational behavior in military simulations, there has been increased interest in research on integrative models of human performance, both within the cognitive science community generally, and within the defense and aerospace industries in particular. This book documents accomplishments and lessons learned in a multi-year project to examine the ability of a range of integrated cognitive modeling architectures to explain and predict human behavior in a common task environment that requires multi-tasking and concept learning.

This unique project, called the Agent-Based Modeling and Behavior Representation (AMBR) Model Comparison, involved a series of human performance model evaluations in which the processes and performance levels of computational cognitive models were compared to each other and to human operators performing the identical tasks. In addition to quantitative data comparing the performance of the models and real human performance, the book also presents a qualitatively oriented discussion of the practical and scientific considerations that arise in the course of attempting this kind of model development and validation effort.

The primary audiences for this book are people in academia, industry, and the military who are interested in explaining and predicting complex human behavior using computational cognitive modeling approaches. The book should be of particular interest to individuals in any sector working in Psychology, Cognitive Science, Artificial Intelligence, Industrial Engineering, System Engineering, Human Factors, Ergonomics and Operations Research. Any technically or scientifically oriented professional or student should find the material fully accessible without extensive mathematical background.

From reader reviews:

Thersa Moss:

Book is usually written, printed, or created for everything. You can understand everything you want by a publication. Book has a different type. As we know that book is important thing to bring us around the world. Next to that you can your reading expertise was fluently. A book Modeling Human Behavior With Integrated Cognitive Architectures: Comparison, Evaluation, and Validation will make you to possibly be smarter. You can feel far more confidence if you can know about everything. But some of you think this open or reading the book make you bored. It is not make you fun. Why they might be thought like that? Have you trying to find best book or suited book with you?

Martina Lassiter:

Reading a publication can be one of a lot of exercise that everyone in the world adores. Do you like reading book therefore. There are a lot of reasons why people like it. First reading a reserve will give you a lot of new information. When you read a guide you will get new information since book is one of many ways to share the information as well as their idea. Second, examining a book will make an individual more imaginative. When you reading a book especially hype book the author will bring someone to imagine the story how the figures do it anything. Third, you are able to share your knowledge to other people. When you read this Modeling Human Behavior With Integrated Cognitive Architectures: Comparison, Evaluation, and Validation, you can tells your family, friends as well as soon about yours guide. Your knowledge can inspire average, make them reading a guide.

Franklin Crossland:

Reading a book being new life style in this yr; every people loves to read a book. When you read a book you can get a lots of benefit. When you read publications, you can improve your knowledge, because book has a lot of information onto it. The information that you will get depend on what kinds of book that you have read. If you need to get information about your research, you can read education books, but if you want to entertain yourself read a fiction books, these kinds of us novel, comics, in addition to soon. The Modeling Human Behavior With Integrated Cognitive Architectures: Comparison, Evaluation, and Validation will give you new experience in examining a book.

Margaret Watt:

That reserve can make you to feel relax. That book Modeling Human Behavior With Integrated Cognitive Architectures: Comparison, Evaluation, and Validation was colorful and of course has pictures on there. As we know that book Modeling Human Behavior With Integrated Cognitive Architectures: Comparison, Evaluation, and Validation has many kinds or category. Start from kids until teens. For example Naruto or Private investigator Conan you can read and think that you are the character on there. Therefore , not at all of book usually are make you bored, any it offers up you feel happy, fun and loosen up. Try to choose the best

book in your case and try to like reading that will.
