Integer Programming: Theory and Practice (Operations Research Series)

Integer Programming: Theory and Practice contains refereed articles that explore both theoretical aspects of integer programming as well as major applications.

This volume begins with a description of new constructive and iterative search methods for solving the Boolean optimization problem (BOOP). Following a review of recent developments on convergent Lagrangian techniques that use objective level-cut and domain-cut methods to solve separable nonlinear integer-programming problems, the book discusses the generalized assignment problem (GAP). The final theoretical chapter analyzes the use of decomposition methods to obtain bounds on the optimal value of solutions to integer linear-programming problems.

The first application article contains models and solution algorithms for the rescheduling of airlines following the temporary closure of airports. The next chapters deal with the determination of an optimal mix of chartered and self-owned vessels needed to transport a product. The book then presents an application of integer programming that involves the capture, storage, and transmission of large quantities of data collected during testing scenarios involving military applications related to vehicles, medicine, equipment, missiles, and aircraft.

The next article develops an integer linear-programming model to determine the assortment of products that must be carried by stores within a retail chain to maximize profit, and the final article contains an overview of noncommercial software tools for the solution of mixed-integer linear programs (MILP). The authors purposefully include applications and theory that are usually not found in contributed books in order to appeal to a wide variety of researchers and practitioners.

From reader reviews:

Donn Chavez:

As people who live in the modest era should be up-date about what going on or information even knowledge to make them keep up with the era that is certainly always change and make progress. Some of you maybe may update themselves by studying books. It is a good choice for yourself but the problems coming to an individual is you don't know which you should start with. This Integer Programming: Theory and Practice (Operations Research Series) is our recommendation so you keep up with the world. Why, because this book serves what you want and want in this era.

Eileen Williams:

This book untitled Integer Programming: Theory and Practice (Operations Research Series) to be one of several books which best seller in this year, this is because when you read this book you can get a lot of benefit upon it. You will easily to buy this kind of book in the book store or you can order it by way of online. The publisher in this book sells the e-book too. It makes you more easily to read this book, as you can read this book in your Smart phone. So there is no reason to your account to past this publication from your list.

Christopher Levi:

Do you one of the book lovers? If so, do you ever feeling doubt while you are in the book store? Make an effort to pick one book that you just dont know the inside because don't assess book by its cover may doesn't work the following is difficult job because you are frightened that the inside maybe not while fantastic as in the outside search likes. Maybe you answer might be Integer Programming: Theory and Practice (Operations Research Series) why because the excellent cover that make you consider with regards to the content will not disappoint a person. The inside or content is actually fantastic as the outside as well as cover. Your reading sixth sense will directly guide you to pick up this book.

Pamela Bost:

What is your hobby? Have you heard this question when you got students? We believe that that question was given by teacher to their students. Many kinds of hobby, Everyone has different hobby. And also you know that little person like reading or as studying become their hobby. You need to know that reading is very important as well as book as to be the matter. Book is important thing to provide you knowledge, except your own personal teacher or lecturer. You see good news or update about something by book. Amount types of books that can you choose to adopt be your object. One of them is niagra Integer Programming: Theory and Practice (Operations Research Series).
