**Introduction to Statistical Analysis of Laboratory Data** Alfred Bartolucci, Karan P. Singh, Sejong Bae  
Introduction to Statistical Analysis of Laboratory Data presents a detailed discussion of important statistical concepts and methods of data presentation and analysis

- Provides detailed discussions on statistical applications including a comprehensive package of statistical tools that are specific to the laboratory experiment process
- Introduces terminology used in many applications such as the interpretation of assay design and validation as well as “fit for purpose” procedures including real world examples
- Includes a rigorous review of statistical quality control procedures in laboratory methodologies and influences on capabilities
- Presents methodologies used in the areas such as method comparison procedures, limit and bias detection, outlier analysis and detecting sources of variation
- Analysis of robustness and ruggedness including multivariate influences on response are introduced to account for controllable/uncontrollable laboratory conditions
